SPC vinyl flooring

Interiors with a new character

When renovating or furnishing a home, we look for products that are not only beautiful, but also durable, long-lasting and easy to install. Increasingly, we want to enjoy the effect of the changes immediately after the work is completed. SPC's waterproof vinyl panels have been designed to transform any interior quickly and easily, without unnecessary mess. They are a guarantee of saving time and money, while ensuring high quality materials.

The perfect finish
for any space

Customised technology

SPC vinyl flooring (Stone Polymer Composite) is a modern solution that combines the durability of stone with the flexibility of polymers. Its rigid composite core ensures outstanding stability, resistance to mechanical damage, and everyday comfort.

Thanks to the decorative layer and UV coating, SPC flooring retains its aesthetic appearance for years - even in high-traffic areas. One of its key features is its high abrasion class, making it an ideal choice for both residential and commercial interiors.

SPC floors are highly resistant to scratches, deformation, and moisture. In addition, they offer excellent acoustic and thermal insulation, providing lasting comfort and convenience in any space.

Elegance and functionality. The perfect combination

SPC vinyl flooring is a reliable solution for moisture-prone areas. Thanks to its complete waterproof properties, it performs exceptionally well in bathrooms, kitchens, laundry rooms, and commercial spaces where durability and safety are essential.

Beyond its excellent technical performance, SPC flooring features rich, contemporary designs that adapt effortlessly to a variety of interior styles - from classic to modern. Its visual appeal, combined with resistance to water and damage, makes it a practical and elegant choice for everyday living.

Product features

Drop Lock

The I4F drop lock system makes SPC floor installation quick and simple. Its advantages include:

- Exceptionally tight connection: perfect for kitchens and bathrooms, it resists standing water for up to 24 hours.
- Durable and rigid: allows flooring to be laid without expansion joints at doors for areas up to 10 linear meters (100 m²).
- Faster installation: reduces installation time by 30% compared to fall-down locks.

Water resistant material

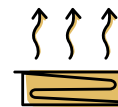

SPC vinyl flooring is fully water resistant, making it ideal for kitchens and bathrooms. To prevent water penetration under the panels, it is recommended to glue the flooring in these areas, avoiding moisture buildup and the risk of mold or unpleasant odors. The flooring also features an R10 anti-slip rating, ensuring safety even on wet surfaces.

AC5

Abrasion class

With an AC5/33 rating, SPC vinyl flooring is highly resistant to wear and tear, making it perfect for high-traffic areas such as public buildings. Its durability ensures long-lasting performance in even the most demanding environments.

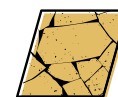

Underfloor heating

This product is compatible with water-based underfloor heating systems, making it a great choice for apartments and homes. Its technical parameters ensure comfort and efficiency when used with underfloor heating.

Micro-Bevel Design

The micro-bevel detail enhances the floor's elegance, creating a seamless, natural look between planks. It reduces the visibility of dirt and dust in the joints, making cleaning and maintenance easier.

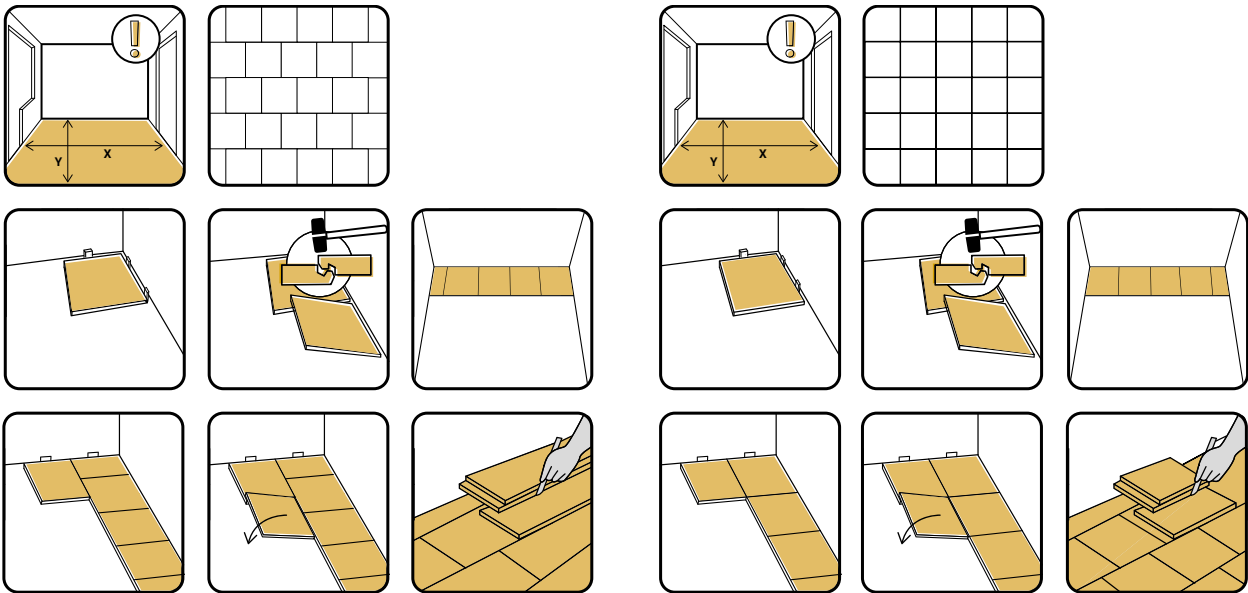

Embossing

Thanks to its tactile texture, panels perfectly mimic natural materials, offering the elegance of stone with the durability and easy maintenance of SPC flooring.

Easy installation

SPC vinyl panels are the ideal solution for those who value convenience, simplicity, and fast installation. Thanks to the advanced Drop Lock system, their installation is exceptionally intuitive and can be carried out even without professional experience.

Floors with Integrated Underlay - Comfort and Easy Installation

Floors with an integrated underlay are a modern solution that combines aesthetics, functionality, and user comfort. The built-in underlay effectively reduces noise, improving the acoustic comfort of the room. The IXPE underlay used is suitable for underfloor heating, and the installation process is faster, simpler, and more cost-effective, as there is no need for an additional underlay. Floors with an integrated underlay are available in all color variations, making it easy to match them to any interior design. It is important to remember that floors with an integrated underlay should not be glued to the subfloor - they are designed for floating installation only.

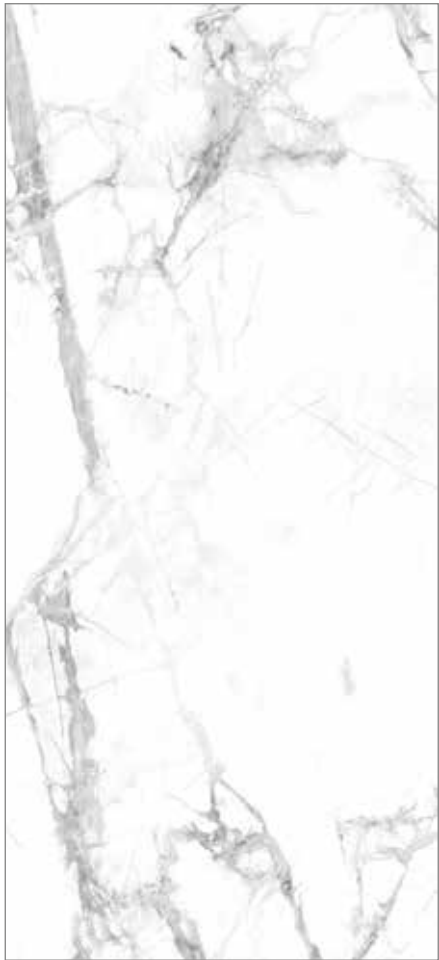

Complementary product range

Our offer includes both SPC walls and flooring solutions, coming together to create a cohesive interior system. The wall panels and SPC floors share identical colour schemes and precise dimensional alignment. This ensures that both products seamlessly work together, forming a uniform, harmonious space. This is the first solution of its kind on the market, offering full compatibility between walls and floors, providing an exceptional aesthetic effect and ease of installation. It's an ideal choice for those who value cohesion, elegance, and a modern approach to interior design.
